

Hach AF7000 Technical Support

As the manufacturer for Hach of the AF7000 SCM we are very happy to be able to provide you the spare parts and technical support for your Hach AF7000 SCM.

This document will be a live document that will be updated on a regular basis to provide you with technical information and manufacturing updates on parts, component wiring or description of changes that occur for AF7000 componentry.

The reason for these changes are that a small number of the proven parts of the AF7000 have been incorporated into our AccuFloc AF9000 next generation SCM. These parts include the Sensor, Piston, Stainless Steel Stem Assembly, Linear Bearings, Tri-Clover connection, Water Weir Controller and Auto Flush system. Some of these parts are interchangeable and some we have upgraded. They will have wiring colour coding or technical changes to optimize the manufacture and or meet international certification codes. We will keep you informed so there is always a central source of information.

Do you need to replace or upgrade your old Hach AF7000?

Check out our AccuFloc AF9000, designed as the next generation SCM featuring our Magnetic Linear Drive (Patent Pending) it's frictionless, wear and maintenance free coupled with our unique single button calibration for Zero and Span settings.

Your new AF9000 SCM with proven reliability has low maintenance and is easy to operate and understand.
